

dB BLOCKER® BIKERBUDDY™

"THE SMARTEST HEARING PROTECTION IN THE WORLD,"

dB BLOCKER® BIKERBUDDY™

dB Blocker® BikerBuddy™ offers the noise isolation and comfort of the dB Blocker® custom hearing protector and high fidelity stereo sound from your digital music player or bike sound system. BikerBuddy™ lets you hear the full range of your recording even at highway speeds.

For the rider who wants to listen to their digital music player or radio, BikerBuddy™ is the ideal way to take your tunes on the road. BikerBuddy™ is a headset that connects to your digital music player and is specially designed to work in the harsh environment bikers endure. Wind noise, bike rumble, and traffic sounds compound to make listening to radio or music a challenge while riding. Custom Protect Ear has found a solution. BikerBuddy™ uses dB Blocker® ear pieces giving you extremely comfortable isolation from wind noise and bike growl and the quality music sounds of specially tuned dual stereo transducers. The sound reaches the protector through sound tubes that pass over the ear. This over-the-ear design allows for use with either full face or ½ shell helmets. It also allows for your BikerBuddy™ to be easily repaired if you damage them.
