

## Music

### ER 6 (#186)

ER 6 Isolator Earphones are in-the-ear, high-fidelity transducers developed to combine flat frequency response. We combine them with custom db Blocker experience to provide isolation from external noise. When properly sealed in the ears, these earphones provide 15-20 dB of external noise exclusion. This allows the listener to hear the full dynamic range of recordings at lower reproduction levels.

- Perfect for travel and commuting – plug into any audio source (airplanes, laptop, computers, CD, DVD, MP3, Motorcycle)
- Smooth, extended high-frequency response
- Excellent bass
- Requires custom earpiece for maximum effect (#2700)

### ER 6i (#187)

6i Isolator Earphones are designed specifically for use with an Apple iPod® and other small portable players, offering 8 dB higher overall sensitivity and 8 dB more bass than the ER-6 Isolator earphones.

- In-the-ear secure fit for optimal performance
- Highly accurate music reproduction with greater sound output and enhanced bass
- Exceptional noise isolation
- Requires custom earpiece for maximum effect (#2700)

### ER 4

**ER-4S** (stereo #171) earphones have a flat frequency response that is the closest to a perfect fidelity response of any in-the-ear earphones, and equal to that of electrostatic earphones that cost thousands of dollars. Designed for home stereo systems or as monitors, these earphones can be used with a headphone amplifier when using low-power portable devices.

- Requires custom earpiece for maximum effect (#2800)

**ER-4P** (portable #185) earphones have 12 dB higher overall sensitivity and enhanced bass compared to the ER-4S. ER-4P earphones can be used with portable players without requiring an additional amplifier. The finest portable music headset available.

- Requires custom earpiece for maximum effect (#2800)

## ER 20 (#170)

### ER-20 Ready-Fit High Fidelity (#170)

Earplugs are ready-fit earplugs that preserve sound quality while reducing sound levels approximately 20 dB equally in all frequencies. ER-20s reduce harmful sound without distorting speech and music. For more information visit [www.etymotic.com](http://www.etymotic.com)

### ER-20 Custom-Fit (#3500)

A custom molded earpiece adds comfort and further reduces harmful frequencies.

## Sweet Tones (#3200, #3000, #4000)

Sweet Tones Musicians hearing protection replicates the natural response of the ear canal so the sound heard with these earplugs has the same quality as the original, just quieter.

Musicians practice and perform in a variety of different settings and they are exposed to high levels of sound, sometimes for long periods. They require different amounts of protection depending on the sound levels they encounter during rehearsals and performances, therefore musician plugs are available in different levels of sound reduction:

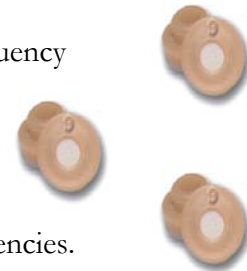

**ER-9:** Flat 9 dB sound reduction through the mid-range. Same high frequency protection as the ER-15.

**ER-15:** Provides uniform 15 dB sound reduction across all frequencies.

**ER-25:** Provides 25 dB of relatively flat sound reduction across all frequencies.

*Important:* Sweet Tone hearing protectors require custom earmolds. Impressions must be taken to create these earplugs.

## CPA (#7800, #7900)

The CPA is an alternative to using the standard earbud for you walkman. Your walkman headset earbud fits into the cup of the custom molded ear piece giving you the same sound quality, additional comfort, and no background noise. Great for use at the gym, on an airplane, when mowing the lawn, etc.

*This is an example of an earbud that could be inserted into a CPA. You must supply your own headset in order for us to provide a proper fit.*
