

dB Blocker SplishSplash™

The dB Blocker® SplishSplash™ offers the protection from water that you need when swimming and bathing.

The dB Blocker SplishSplash is a product different from all others we manufacture. Not used as a hearing protection device, but rather as a block to prevent water from entering the ear canal. Because chlorine defeats the ears' natural protective mechanisms, this can be a necessity for those who suffer from recurrent ear infections, for those who have had operations on their ears, and for those who swim on a regular basis.

RECOMMENDED USES:

- Competitive Swimming
- Recreational Swimming
- Showering

The use of this protector is not limited to the above applications.

FEATURES:

- Made of custom blended buoyant silicon
- Custom fitted to each wearer
- Cast retained for 5 years
- Colored florescent yellow
- Made without the cord attachment

BENEFITS:

- They float so you can recover them if they pop out of the ear
- Seals the ear canal perfectly like a “key in a lock”
- Easily re-ordered if one or both go missing
- Brightly colored to be easily retrieved
- A must for every regular swimmer
