

Custom Protect Ear

ISO 9001-2000

# IT'S ALL IN THE DETAILS

A successful distribution operation is more than a warehouse with forklifts. As an organization that integrates with your customer's needs, your services depend heavily on getting and working with the right information. With forklifts flying and trucks hauling, everyone needs to work together to get it right the first time. Every time. But the **pressure to perform perfectly can lead to even costlier mistakes**, which means you need to invest in your workers' best interests to get the best results.

Specializing in personalized hearing protection, Custom Protect Ear (CPE) has helped many logistics companies overcome their performance limitations and safety concerns. From the very start, we assess the noise levels and working conditions each person faces. Then we determine the best protectors for the individual and make appropriate recommendations for **optimal productivity, protection, and comfort**.

While workers who handle many different jobs may not be exposed to high noise levels constantly, they still need to be protected when noise strikes. **CPE's dB Blockers™ don't interfere with the day's work**. Instead, they sit properly and comfortably in the ears all day long, and even enhance interpersonal and radio communication.

This is especially beneficial since the single biggest source of noise and threat to your workers' hearing is often the radio they carry. In order to be heard above the din around them, the radio must be set at least three decibels louder. But dB Blockers™ are designed to integrate with all modes of communication, so workers can communicate and hear clearly at all times while staying protected.

With your workers' hearing properly protected by dB Blockers™, you can rise above all these challenges, enabling you to **avoid mistakes and get things done efficiently and accurately**.
